

Team Name: PublicEnemy  
Code Review of Hydration's Lab02

Comments: 4

Abundance of clear, concise comments makes code easy to understand. Great use of commenting of code that you decided was not needed!

Style: 4

Great use of whitespace, simple and easy to follow. Smart variable names were used. Everything was clearly delineated and separated. No improvements here.

Robustness: 4

Successful incorporation of methods in Deque.java, including the exceptions. The main method could be improved to test all your methods but the functionality of the code is still good.

Readme.md: 4

Well done as well, your plan was laid out well and made sense. Using checklists in order of priority was a great organizational move as well. Not much we would add here.
