

Review by Team Applesauce 9

Team Hydration

[3] COMMENTS

- Some methods were missing comments that explained functionality
- the use of iterator was not explained \rightarrow confusing

[4] STYLE

- methods were ~~clean~~^{ln} organized
- white spaces were consistent

[5] ROBUSTNESS

- reuses and adopts already-written codes
- code is ~~concise~~ concise and without extra irrelevant bits.

[6] README.md

- clear explanation as to why doubly-linked ~~list~~ node is used as the underlying container.
- easily readable list of implemented ~~the~~ methods separated by functionality and why each method was chosen.

Review for Hydration

COMMENTS	STYLE	ROBUSTNESS	README.md
4 Descriptive comments about method functions	4 Easy to read Variable names make sense	3 getFirst() and getLast() do not account for an empty queue removeFirst() does not change _tail if removing the last element in the queue. Same issue with removeLast() and _head	4 Includes everything required Looks nice
